

Emergency and Disaster relief

ITU-R Special Supplement

Radiocommunication Bureau

International
Telecommunication
Union

ITU is an international organization within the **United Nations System** where governments and the private sector coordinate global telecom networks and services.

THE RADIOCOMMUNICATION SECTOR OF ITU

The role of the Radiocommunication Sector is to ensure the rational, equitable, efficient and economical use of the radio-frequency spectrum by all radiocommunication services, including satellite services, and carry out studies without limit of frequency range on the basis of which Recommendations are adopted.

The regulatory and policy functions of the Radiocommunication Sector are performed by the World and Regional Radiocommunication Conferences and Radiocommunication Assemblies supported by Study Groups.

The ITU Radiocommunication Sector plays a vital role in the management of the radio-frequency spectrum and satellite orbits, finite natural resources which are increasingly in demand from a large number of services such as fixed, mobile, broadcasting, amateur, space research, meteorology, global positioning systems, environmental monitoring and, last but not least, those communication services that ensure safety of life on land, at sea and in the skies.

Handbook on Emergency and Disaster relief (ITU-R Special Supplement) Edition of 2006

Telecommunication is critical at all phases of disaster management. Aspects of radiocommunication services associated with disasters include, *inter alia*, disaster prediction, detection, alerting and disaster relief. In certain cases, when the "wired" telecommunication infrastructure is significantly or completely destroyed by a disaster, only radiocommunication services can be employed for disaster relief operation.
